erty is a concern for everyone. Injuries can open at any time, to anyone working in particularly high risk jobs such as high-rise construction, restoration, window cleaning, and mechanical equipment maintenance.

ASP Safety Services Inc. can minimize these s by providing you with superior Engineered ety Anchoring Systems, Fixed Access Ladders l Safety Guard Railings.

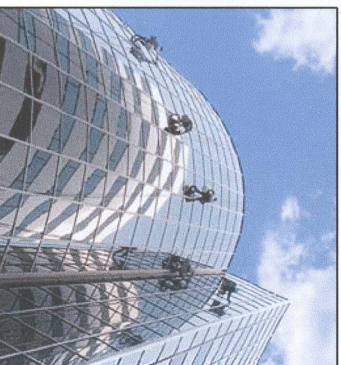

Our friendly and knowledgeable staff can provide you with information and supply free quotes on our specialized services, which include:

- Safety Anchor
- Supply/Installation
- Engineer
- Approved Drawings
- Horizontal Cabling
- Safety Railings
- Ladders & Cages

As per current applicable codes and guidelines, safety roof anchoring systems are a requirement. In addition, because of these codes, building owners are to provide a safe work place.

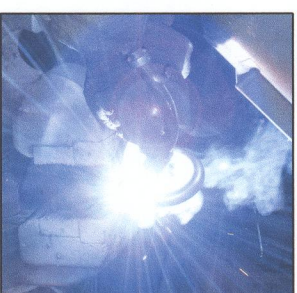

Should an accident occur due to improper tie off points, the responsibility can be placed directly on the Owner. This is the single greatest reason to have an engineered anchoring system supplied and installed by GRASP Safety Services!

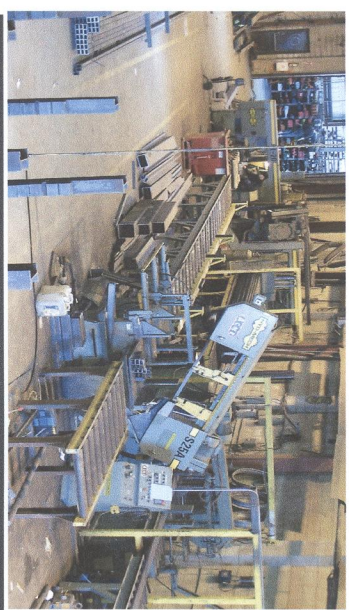

All components of our anchors which take regular abuse are comprised of 304 Stainless Steel – most importantly, the top loop

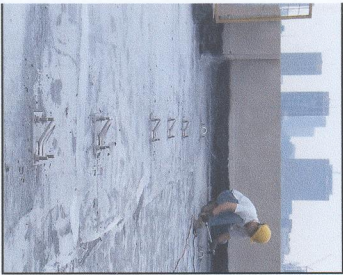

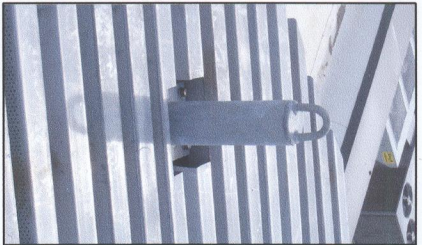

At GRASP Safety Services, the safety of you and your employees is of the utmost importance. For this reason we use only prime quality material, CWB Certified Welders & Fabricators, ensuring you the highest quality product!

With our in house manufacturing facility, we can customize our anchors, railings and ladders to specific site conditions to suit your needs!

## HORIZONTAL LIFELINE CABLING SYSTEMS

GRASP Safety Services fabricates & installs Horizontal Lifeline Cabling Systems which allow workers safe access to roof edge (e.g. for re-flashing, mech. unit maintenance, etc.). All of our Horizontal Lifelines are designed for Fall/Travel Restraint. As per CAN/CSA Z259.16-04, the design of our fall-protection systems is reviewed by an independent P. Eng.

### 1. Double-Lanyard Cabling System

GRASP Safety Services' typical Horizontal Lifeline Cabling System.

### 2. Pass-Through Cabling System

GRASP Safety Services now offers a hands-free Pass-Through Cabling System.

The Pass-Through Cabling System allows workers to travel along a cabling span without having to disconnect and reconnect which means increased safety and productivity!

*all us today for more information,  
on any of our fall prevention,  
restraint & arrest equipment!*
