The roof remover attachment mounted on a Hydraulic Tractor makes it one of the most powerful tear off machines on the market. With an articulating head backed by a powerful hydraulic system this attachment has the ability to channel the power of your hydraulic tractor where you need it, on the roof deck.

The smooth speed control of the Hydraulic Tractor is a key reason for the efficiency of the Roof Remover Attachment, the speed can be set based on the toughness of the tear-off to get maximum efficiency out of the ramming action of the articulating head.

Versatility

At All Seasons Equipment versatility is key, that is why both the Roof Remover Attachment and the [Sweeper Attachment](#) for the Hydraulic Tractor can be installed on our [SS16 Cheetah Skid Steer Loader](#). Attaching these attachments does require an [attachment bracket](#) on the SS16 as well as hydraulic hose extension but solid power of the SS16 and the ability to use more of your attachments at critical times makes the Hydraulic Tractor / Cheetah combination a powerful one.
